MEET THE NEW
BLIZZAK LM-80

BLIZZAK

ALL-ROUND PERFORMER WINTER CONDITIONS

Representing the pinnacle of technological innovation, the Blizzak LM-80's superior tread design and advanced materials engineering offer outstanding all-round performance on snow, in the wet and on dry surfaces.

- Increased winter performance on snow & ice
- Higher wet grip
- Excellent handling on dry roads

SLUSH/WET PERFORMANCE

One of the main advantages of the Blizzak LM-80 is its outstanding performance in slush and on wet surfaces without compromising on winter performance.

High-volume grooves move slush and water away from the contact patch

- ➔ Maximum safety and reliability

SNOW PERFORMANCE

Tread Pattern Design

- Unidirectional pattern
- High groove volume
- High pattern stiffness

- ➔ Secure Snow traction in any condition

Multidirectional sipes

The multidirectional sipes, in turn, increase the number of biting edges for maximum traction while cornering.

DRY PERFORMANCE

The tyre's stiff shoulder blocks and central rib offer superb straight-line stability and precision response in all conditions.

Stiff shoulder blocks for cornering power

Central Rib for straight-line stability

COMPOUND

The tyre's outer tread compound is optimised for maximum traction at low temperatures while the under-tread compound reduces internal heat build-up, resulting in lower rolling resistance and, in turn, reduced fuel consumption. And with its pattern optimised to reduce noise, the Blizzak LM-80 ensures a smooth, relaxing ride.

The Blizzak LM-80's characteristic balanced performance guarantees superior safety and handling on all surfaces from autumn to spring.

Resolute Performance

Discover the exhilaration of winter with the all-new SUV and 4x4 winter tyre from Bridgestone. Setting new standards for safety, comfort and performance, the Blizzak LM-80 offers outstanding handling characteristics in all conditions.

**BLIZZAK
LM-80**

- Superior lamellen design for balanced control on winter road surfaces
- Unidirectional tread with advanced sipe platforms designed for winter traction and handling on snow and ice
- High-volume transversal grooves to clear water and slush for superior wet grip
- Revolutionary winter compound for reliable and efficient performance
